

GSM Security Systems

GSM-250b

July
2010

GSM-250b alarm system is ideal for monitoring production process or alerting of any problems with security or equipment. Reporting process status or failure and is can be used for marine or domestic & and business environments.

Text messages & calls: When a problem detected or parameter met, texts are sent or data transmitted to a monitoring system.

Intruder Detection: Connect sensors to such as PIR, glass break, door contacts, battery low warning, mains failure or other sensors can also be added.

Two Way audio: listen in locally and warn any intruder their presence is known.

Remote Control: 8 circuits such as heating, cooling, generators controlled by a simple phone call or text message to switch on and off systems.

Analogue Inputs: Monitor voltage, power, level and others.

Real Time monitoring: Reports via text message or by linking into a central monitoring station using GPRS signalling.

Smoke, fire & LPG gas sensors available, which can be linked into the system for more advanced protection.

Features

- 8 input, 8 output
- 4 analogue inputs
- Power failure SMS notification

Specification

- 12V DC or 230V AC power supply
- 20mA stand-by current
- 12 Months Warranty

Standard pack includes

- Power supply
- CD Software & Manual
- Pay As you Go SIM card
