

**GSM-RTC100** GSM remote temperature and heating system controller allows remote control of heating using mobile phone. Take control of your heating system and no longer arrive to a cold home, office, caravan or chalet by switching your heating on remotely.

Ideal for:

- Shift workers
- Nurses
- Homes & second homes
- Office
- Caravans & chalets
- Greenhouse temperature control
- Server rooms

By making a quick FREE call to the unit to run the heating for a preset time and temperature or by sending text messages to override the system to allow you to remotely set the temperature and how long it should be kept for.

Mains failure alerts as well as auxiliary inputs allow for alarms to be reported. EX-BUS compatibly allowing the system to grow to control more inputs and output relays to control equipment such as lighting, hot-tubs or Jacuzzis to ensure they are ready to on arrival, and also monitor more inputs as needed.

Works stand alone or in conjunction with existing timers to give flexibility and easy control.

By ensuring heating is only operating when required, big savings on energy can quickly repay the cost of the system and help reduce CO2 emissions and energy bills by not wasting heat.

### Features

- Up to 20 users
- Compatible with all networks
- Frost & pipe protection
- Inputs for alarm notification
- Mains failure / restore text
- Battery backup (battery not inc)
- No call costs to operate
- Easy programming
- Pay As you Go SIM card included
